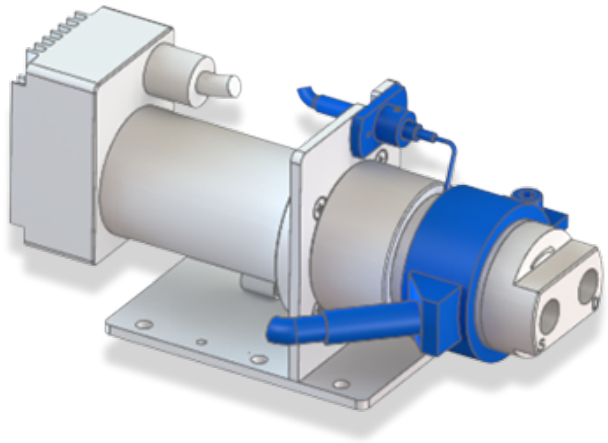
Product information

Electrical heating module · Supplementary Modules



Description

The electrical heating module enables active heating of the pump head. The max. temperature depends on the pump head's material combination. The motor is protected from overheating by a heat insulation module. The electrical heating module comprises a heating jacket covering the pump head and a thermal element which is mounted directly in the pump head. A temperature control unit should be used in order to control the temperature of the pump head.

Accessories

- Temperature control unit
